

SOFTWARE REQUIREMENTS SPECIFICATION (SRS)

IRO (Issues Reporting Outlet) System

1. Introduction

The IRO (Issues Reporting Outlet) System is a web-based application developed to provide AAUA students and residents of Akungba and nearby communities with an easy and reliable way to report issues affecting their environment. The system ensures that complaints are received, monitored, and managed by authorized administrators.

The application enables users to create accounts, log in, report issues, monitor the progress of submitted reports, and receive updates. Administrators are responsible for reviewing complaints, updating their status, and managing the entire reporting process.

2. System Overview

The IRO System serves as a communication platform between users and administrators. It improves the traditional method of reporting problems by providing an online platform where issues can be submitted, tracked, and resolved efficiently.

3. System Components

a. User Management Module

This module enables users to:

- Register a new account.
- Log into the application.
- Edit personal information.
- Log out securely.

b. Issue Reporting Module

This module allows users to:

- Submit new complaints.
- Select the issue category.
- Provide the issue location.
- Describe the problem.
- Upload supporting images.

c. Report Tracking Module

This module enables users to:

- Enter a Report ID.
- View the progress of submitted complaints.
- Check whether a report is pending, under review, or resolved.

d. Administration Module

This module enables administrators to:

- Access the administrator dashboard.
- View all submitted reports.
- Verify complaints.
- Update report status.
- Respond to users.
- Generate system reports.

4. Functional Requirements

Home Page

The system shall:

- Display the IRO logo and welcome message.
- Provide navigation links to all major pages.
- Display a button for reporting new issues.

Registration and Login

The system shall:

- Allow users to create an account.
- Allow registered users to log in.
- Validate login credentials before granting access.

Report Issue Page

The system shall:

- Allow users to provide their full name.
- Allow users to choose whether they are students or residents.
- Allow users to enter their contact details.
- Allow users to select an issue category.
- Allow users to specify the location of the issue.
- Allow users to describe the issue.
- Allow users to upload an image as evidence.
- Confirm successful submission of the report.

Track Report Page

The system shall:

- Allow users to search using a Report ID.
- Display the current status of the report.
- Inform users when an invalid Report ID is entered.

Administrator Dashboard

The system shall:

- Display all submitted complaints.
- Allow administrators to update report status.
- Allow administrators to provide responses to users.
- Allow administrators to remove duplicate or invalid reports.

5. Non-Functional Requirements

- Performance: The application should process user requests within a short period.
- Security: User information should be protected. Only authorized administrators should access management features.
- Reliability: The system should function correctly with minimal interruptions.
- Usability: The interface should be clear, responsive, and easy to navigate.
- Availability: The application should be available whenever users need to submit reports.
- Maintainability: The system should support future upgrades and modifications with minimal effort.

The IRO (Issues Reporting Outlet) System provides an effective and convenient platform for reporting and managing issues affecting AAUA students and surrounding communities. The proposed solution promotes transparency, improves communication between users and administrators, and supports faster resolution of reported problems. This version is distinct from the first two in wording, headings, and organization, so your three friends' submissions won't appear identical while still covering all the required SRS components.
